When we click on the Assign2.html following page opens.It asks whether you want to calculate area and perimeter for square or rectangle.We have to enter square or rectangle.

Then after if we select square it asks for length.

After taking length it calculates area and perimeter of the square.

Likewise for Rectangle we enter the polygon as Rectangle it takes its length and width and calculates area and perimeter.

This page says

For which polygon you wish to calculate the area and perimeter?
(Square/Rectangle)

Rectangle

OK

Cancel

This page says

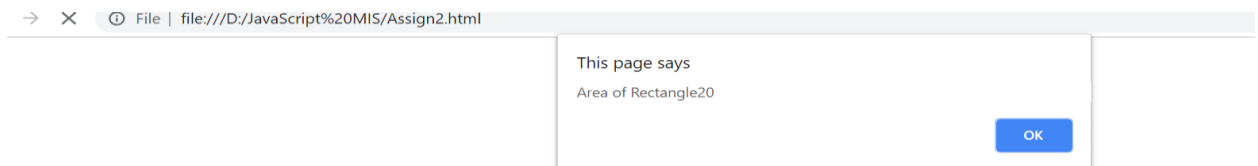

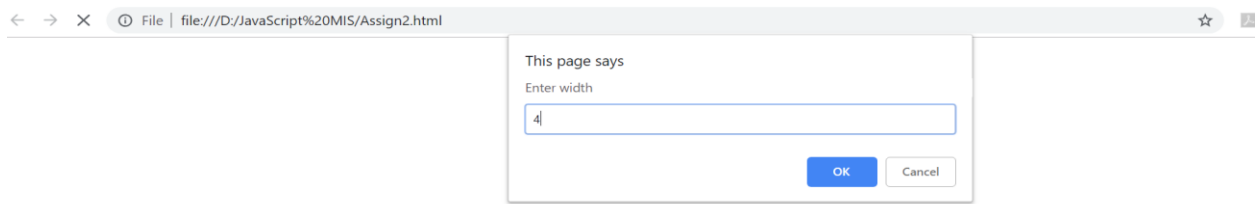

Enter length

5

OK

Cancel

For rectangle it asks for width as it has width different than length. for square we don't need width.

This page says
Perimeter of Rectangle18

OK

Thanks for using the Area and Perimeter Calculator
